DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1 9, 25 32 and 47, drawn to a polyurethane elastomer, classified in class 528.
 - II. Claims 15 24, 38 46 and 48, drawn to a shaped article, classified in class 428, subclass 36.91.
 - III. Claims 10 and 33, drawn to a shaped article, classified in class 428, subclass 36.91.
 - IV. Claims 11 14 and 34 37, drawn to a transfer roller, classified in class 399, subclass 101.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions Group I, claims 1 – 9, 25 – 32 and 47, and Group II, claims 15 – 24, 38 – 46 and 48, are related as mutually exclusive species in an intermediate-final product relationship. Distinctness is proven for claims in this relationship if the intermediate product is useful to make other than the final product (MPEP § 806.04(b), 3rd paragraph), and the species are patentably distinct (MPEP § 806.04(h)). In the instant case, the intermediate product is deemed to be useful as coating on an electronic composite and the inventions are deemed patentably distinct since there is nothing on this record to show them to be obvious variants. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or

identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions anticipated by the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

- 3. Inventions Group I, claims 1 9, 25 32 and 47 and Group III, claims 10 and 33, are related as mutually exclusive species in an intermediate-final product relationship. Distinctness is proven for claims in this relationship if the intermediate product is useful to make other than the final product (MPEP § 806.04(b), 3rd paragraph), and the species are patentably distinct (MPEP § 806.04(h)). In the instant case, the intermediate product is deemed to be useful as coating on an electronic composite and the inventions are deemed patentably distinct since there is nothing on this record to show them to be obvious variants. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions anticipated by the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
- 4. Inventions Group I, claims 1 9, 25 32 and 47, and Group IV, claims 11 14 and 34 37, are related as mutually exclusive species in an intermediate-final product relationship.

 Distinctness is proven for claims in this relationship if the intermediate product is useful to make other than the final product (MPEP § 806.04(b), 3rd paragraph), and the species are patentably

distinct (MPEP § 806.04(h)). In the instant case, the intermediate product is deemed to be useful as foundry patterns, core boxes, impact pads dye pads and wear resistant parts and the inventions are deemed patentably distinct since there is nothing on this record to show them to be obvious variants. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions anticipated by the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

- 5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, different modes of operation, different functions, different effects and their divergent subject matter, restriction for examination purposes as indicated is proper.
- 6. If Group II, claims 15 24, 38 46 and 48, is elected, a species election needs to be made.
- 7. Claims 15 24, 38 46 and 48 are generic to a plurality of disclosed patentably distinct species comprising shaped articles. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed. One of the following groups in the table below will need to be elected.

Application/Control Number: 09/802,760 Page 5

Art Unit: 1772

Group II	Species	Claims
A shaped article	a hardener comprising at least one additional polyol and at least one charge-control agent with a functionality of 0.96 to 1.04	15 - 24
	a hardener comprising at least one additional polyol and at least one charge-control agent capable of being copolymerized with the polyisocyanate prepolymer with a functionality of 0.96 to 1.04	38 - 46
	a hardener comprising at least one additional polyol and at least one charge-control agent with a functionality of 1.00 to 1.04	48

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

8. A telephone call was made to John L. Wood on August 14, 2002 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

9. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the

currently named inventors is no longer an inventor of at least one claim remaining in the

application. Any amendment of inventorship must be accompanied by a request under 37 CFR

1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Patricia L. Nordmeyer whose telephone number is (703) 306-

5480. The examiner can normally be reached on Mon.-Thurs. from 7:00 -4:30 p.m. & alternate

Fri..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Harold Y. Pyon can be reached on (703) 308-4251. The fax phone numbers for the

organization where this application or proceeding is assigned are (703) 872-9310 for regular

communications and (703) 872-9311 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding

should be directed to the receptionist whose telephone number is (703) 308-0661.
